BRIDGING THE GAP BETWEEN ANALOG, IP AND INTELLIGENT VIDEO

The Fusion III DVR Series expands beyond the analog DVR role. It is a full featured hybrid digital recording system that bridges the gap between DVRs and NVRs. The system is designed to record, search and transmit up to a total of 32 channels of analog and digital IP video sources, up to 16 channels of audio, and a single channel of data. Firmware release v3.6 adds many new enhancements that improve performance and make Fusion easier to operate and more effective.

Fusion III v3.6 introduces advanced IP camera integration, Smart Motion search, enhanced logging and Microsoft Active Directory integration. Because Fusion III v3.6 provides in-depth integration of Honeywell IP cameras, operators can discover and add Honeywell IP cameras from a single interface. Additional features such as integrated camera-based motion detection for Honeywell's HCX Megapixel applications, and sensor and audio input management on EQUIP™ are supported in a dynamic new way.

Fusion III v3.6 also provides integration with Honeywell intelligent video analytics; Active Alert®, Smart Impressions® or People Counter. These licensed options automatically detect, analyze and classify the behavior of people and vehicles in a scene; greatly increasing event detection accuracy while virtually eliminating false alarms. Instantaneous history of scene activity against user-selected parameters enable fast interactive searches on site and/or remotely.

Market Opportunities

The cost effectiveness and wide variety of analog camera sources along with the very fast development of digital IP sources have made hybrid DVRs very desirable. Market acceptance of Fusion in educational, municipal and corporate campus environments, retail and hotels and resorts has been high, and further enhancements to ease of use and support of digital IP sources create unsurpassed value for the user.
