4-CHANNEL ACTIVE UTP VIDEO RECEIVER

The Honeywell HUTP452R video receiver is an active (amplified) device that allows the transmission of real-time monochrome or color video up to one mile (1.6 km) using Category-2 or 3 unshielded twisted pair (UTP) telephone wire, or up to 1.5 miles (2.4 km) (NTSC) using Category-5 or better cable.

The unparalleled interference rejection and low emissions of the HUTP452R allow long run video signals to co-exist in the same wire bundle as telephone, datacom or low-voltage power circuits. This enables the use of shared or existing cable.

Ground-lifting ensures no annoying hum-bars when ground potential differences exist. With built-in transient protection, damaging voltage spike problems are eliminated. The built-in sharpness and brightness controls compensate for cable loss.

Market Opportunities

The HUTP452R active UTP video receiver is an ideal solution for receiving video signals at distances greater than 750 feet (225m) and up to 3000 feet (914m) with another Honeywell passive video transceiver, or at distances up to 8000 feet (2438m) from the HUTP653T Honeywell active video transmitter.

UTP transmission is ideally suited for markets such as gaming, retail and education. The HUTP452R can be used for new installations or can leverage existing UTP cable.
