

YOUR PARTNER OF CHOICE

**Multiple Solutions
For Multiple Threats**

Ensuring safety requires reducing the risk of incidents that can disrupt normal operations. Honeywell protects everything from your headquarters to your substations. That's why many of the major utility companies around the world have trusted Honeywell to help keep them in compliance amid ever changing government regulations.

PROTECTING YOUR Valuable Assets

From vandalism to homeland security concerns, utilities face security issues that require an effective, well-designed security system. We understand that security issues can lead to service outages, lost income and harsh fines for noncompliance with federal and state regulations. From your headquarters to your main production facilities to substations, implementing security for a wide range of locations is a challenge that our integrated security solutions will help you meet. Honeywell creates value for your organization in four ways:

Productivity

To maintain high productivity, Honeywell provides technologies that help you make intelligent decisions and take action when necessary. Our complete security management systems combine powerful access control, alarm monitoring, badging and video surveillance into one user interface. Honeywell lets you manage an enterprise-wide security system from a central location while maintaining local autonomy. We ensure that your people, equipment and facility are protected against events that keep your plant from operating at full capacity.

Cost Savings

Theft and property damage lead to major losses — losses that Honeywell can help you prevent. Honeywell saves you time and money by automating manual processes and automating reports for auditing purposes. And you get even more cost savings by using Honeywell's digital video recorders and video analytics to monitor remote locations. Our Rapid Eye™ digital video recorder uses low bandwidth to transmit video and has an audio alarm feature that deters perpetrators before they do damage. And compared to conventional motion detection, video analytics saves time spent on false alarms by determining whether it's a person climbing a fence or just a deer walking by.

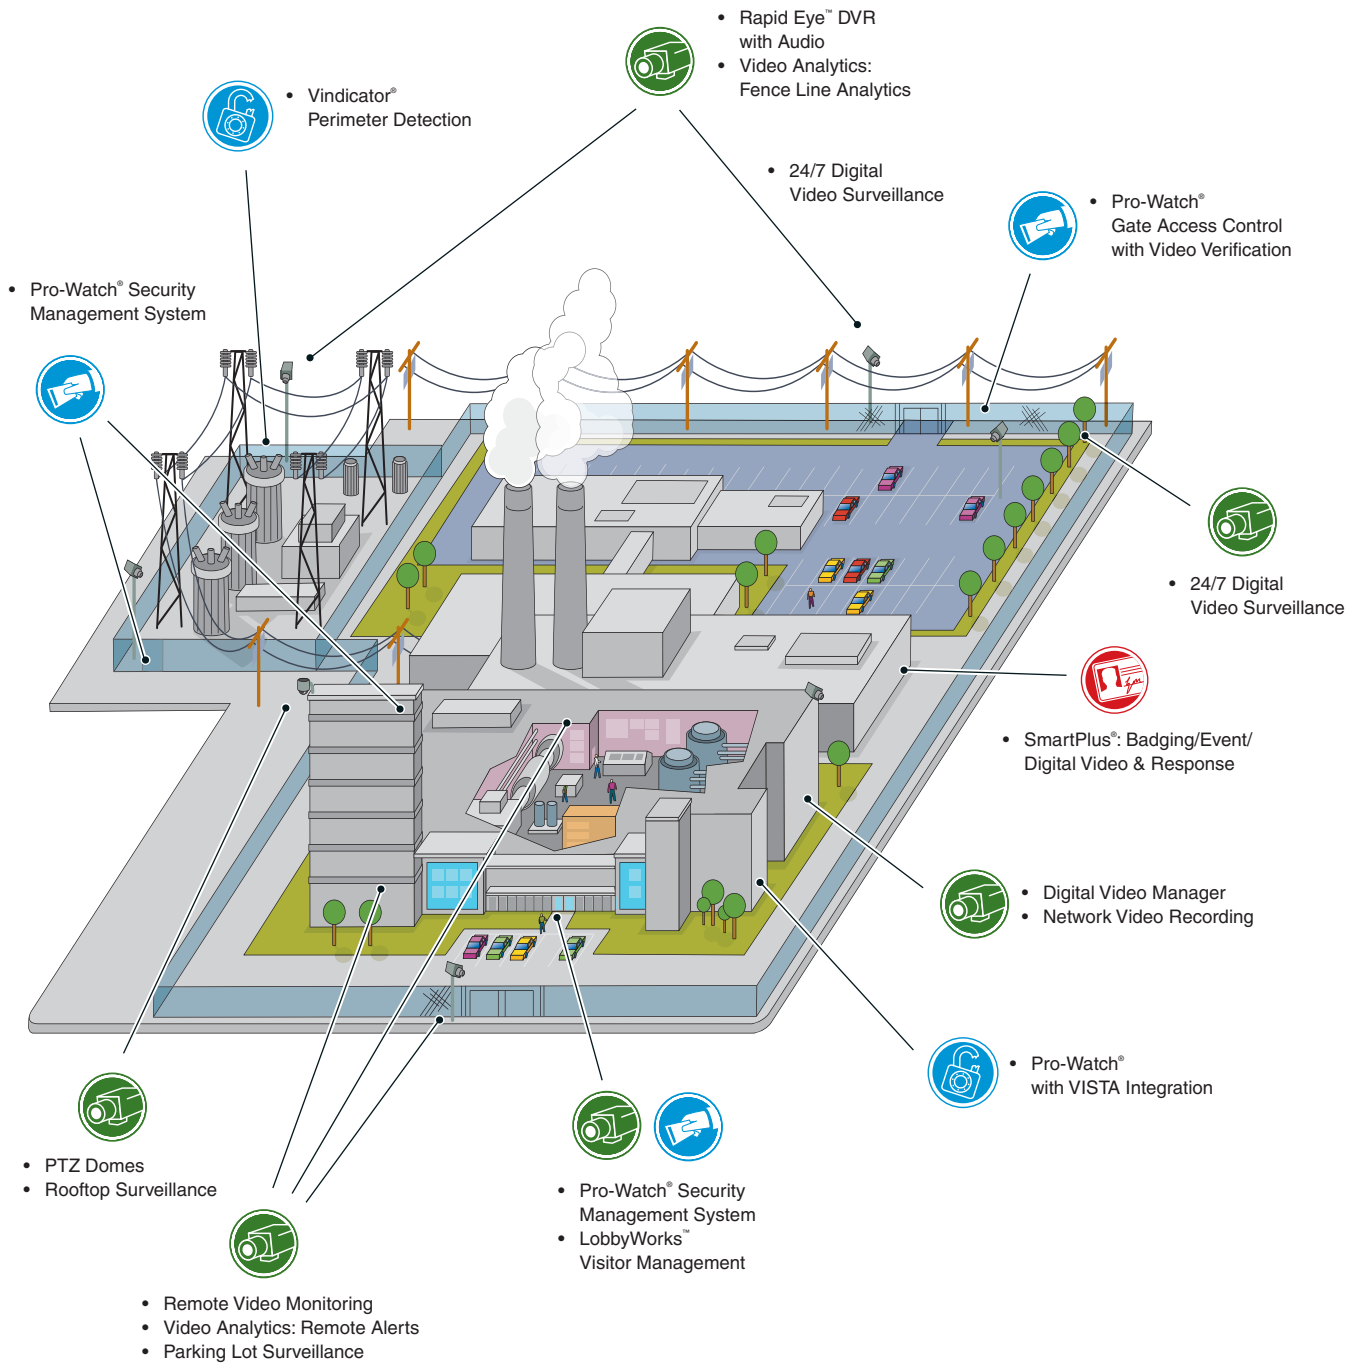

Compliance

Our staff of security experts stays up-to-date on regulatory changes, ensuring that Honeywell's solutions meet compliance requirements for the utilities market. As a result of regulations mandated by Sarbanes-Oxley and regulatory agencies such as the North American Electric Reliability Corporation (NERC), utilities are tightly governed. Noncompliance can hurt stock values for publicly traded companies, and all utilities are subject to fines that can be as high as \$1 million per incident per day. Honeywell's SmartPlus® convergence solution automates and reports on many of the processes required by regulatory agencies and helps with audit reporting.

Security

From petty criminals to terrorists, utilities are prime targets. Billions of homeowners and businesses depend on your organization to deliver the energy and water they need. Honeywell helps to protect your facilities so you can keep those critical infrastructures and businesses running. As one of the world's leading manufacturers of security products, Honeywell has been developing state-of-the-art security technology for more than 50 years. That's peace of mind for you, your customers — and the communities you serve.

Utilities Security Solutions

CUSTOMIZABLE SOLUTIONS

From perimeter security to video analytics and more, Honeywell has the security solutions that utilities need. You can count on Honeywell for multiple levels of security throughout your facilities.

Access Control & Visitor Management

Identity Management & Workflows

At-A-Glance Case Study

Client: Aquila

Situation: As an energy resources distributor that delivers energy to more than 1.3 million Americans across seven Midwestern states, Aquila operates hundreds of sites including major gas interconnects, power substations, power plants and administrative facilities. After 9/11, companies deemed as “critical infrastructures” were instructed to assess their security systems so they could better protect against potential attacks. Aquila needed a security system that could be replicated across their most critical sites and managed from a central station located at their company headquarters.

Results: Honeywell's Pro-Watch® security management system was either installed or upgraded at each site, as well as a Rapid Eye™ Multi-Media Series digital video recorder that captured images from a day/night video system. The security package supporting each of the Aquila sites included ID badging for employees and contractors, access control, visitor management, intrusion detection, perimeter control barriers and devices, and voice over Internet protocol (VoIP). The system's impressive capability to maximize bandwidth means that it can handle and store large amounts of information without crashing and is supportable across a wide area network, even at remote sites.

Honeywell Solutions:

- Pro-Watch® Security Management System
- Rapid Eye™ Multi-Media Digital Video Recorders

We're very happy with our Honeywell system. Our responsibility is to protect the generation and distribution of energy resources to more than 1 million Americans, and we're glad to partner with a company that takes our job as seriously as we do.

John Breckenridge
Director of Security
Aquila

Why Honeywell?

When you work with Honeywell, you're working with an experienced leader who can integrate solutions and technology to provide the level of security your organization needs.

- Recognized leader
- Convergence/integrated solutions
- Global company
- First-class service and support
- Ability to integrate most existing systems with the latest technology
- Company mission to provide a safer, more secure world
