

HD4D Series True Day/Night Mini-Dome Cameras

High resolution technology—for 24/7 vandal resistant security

Our HD4D Series now consists of two models that cover a wider range of viewing angles:

- The HD4D3 is the original HD4D. It's still got the 3.3-12 mm Vari-focal Auto Iris lens that you've grown to know and love, but we've given it a new part number to differentiate it from the new HD4D9.
- The HD4D9 has a 9-22 mm VFAI lens that gives you the same dependable performance as the HD4D but with a longer field of view—letting you zoom in to provide precise, detailed images from a greater distance.

You can count on the same True Day/Night capabilities, hassle-free setup, and 3-D pan/tilt/rotation gimbal that you've come to expect from the HD4D. The IP66-rated HD4D3 and HD4D9 offer super high (540 TVL) resolution that captures crisp video to give you the most accurate picture quality available. Depending on ambient light, these cameras switch automatically from color to black and white to guarantee optimal image quality at all times. When identification of objects is critical, the HD4D3 and HD4D9 produce accurate images—with outstanding precision—down to the smallest detail.

Features:

- One-button toggle control gives you easy access to the On-Screen Display menu for trouble-free installation
- 3-D gimbal capable of 360° pan, 90° tilt, and 360° horizontal adjustment allows for maximum lens rotation
- Local video output and On-Screen Display menu for easy on-site camera setup
- HD4D3 offers 3.3-12 mm VFAI aspherical lens
- HD4D9 offers 9-22 mm VFAI aspherical lens

CUSTOMER BENEFITS

- True Day/Night switching—selects the right mode to capture the best picture and automatically removes the IR cut filter
- Super high resolution digital images—CCD image sensor ensures crisp, clear video
- Digital Noise Reduction—reduces noise at low light levels by 50% so that noise is not recorded, maximizing storage space and providing improved low light images
