

Now you can tie alarm events to video clips and live video from off-the-shelf security products—even after the event has occurred.

The HRGX is the newest H.264 4/8/16 channel embedded DVR from Honeywell's Performance Series. It joins a lineup of feature-rich cameras and DVRs that provide affordable video surveillance solutions to a wide range of everyday security applications.

But what sets this DVR apart from others is this: It's the first device of its kind to connect directly to I-View Now—a patented, cloud-based central station interface that makes video verification as easy as pushing a button. It provides reliable pre-alarm video—so the central station operator can virtually go back in time and see the action captured before the alarm.

HRGX with I-View Now can:

- Take the guesswork out of alarms
- Ensure quick and direct police dispatch
- Add RMR to every surveillance proposal, sale and installation

As the first device of its kind that offers video verification, HGRX uses I-View Now to instantly relate alarm events with video clips and live video—allowing all video and all operator actions to be stored in the event history of the central station software. A true integration of video and central station software, I-View Now eliminates the guesswork from diagnosing the cause of an

alarm, arming central station operators with detailed information that can be invaluable during police response.

Product Features

- HRGX is the only device of its kind designed to connect directly to I-View Now
- Universal plug & play connectivity to I-View Now eliminates the need to configure port forwarding
- No static IP or DDNS* service needed

Benefits

- Simple installation
- I-View Now enables the DVR to be more effectively monitored by a central station
- No DDNS* saves time and money

HRGX – Performance Series DVR
